

Jean-Emmanuel Kouadio

Shepherdstown, WV | 681-283-0298 | emmanuelkj5@gmail.com | github.com/jeanemmanuelk | <https://jeanemmanuelk.github.io/portfolio/> | [linkedin/j-emmanuel-k](https://www.linkedin.com/in/j-emmanuel-k)

TECHNICAL SKILLS

Languages: Python, SQL, PySpark
Analytics & BI: Power BI, Tableau, DAX, Excel
ML/Statistics: Regression, Classification, Time Series, A/B Testing, Feature Engineering, Model Validation
Libraries: Pandas, NumPy, Scikit-learn, XGBoost, NLTK
Data/Cloud: Azure Databricks, Azure Data Factory, Oracle (SQL/FDI/OTBI), SQL Server
Tools: Git, VS Code, Jupyter Notebook

WORK EXPERIENCE

Data Analyst May 2025 - Jan 2026

SU Wellness Center | *Shepherdstown, WV*

- Built churn prediction models (logistic regression, random forest) in Python to identify members at risk of cancellation, improving renewal rates by 25% and preventing 100+ membership losses annually.
- Developed Power BI dashboards monitoring membership growth, retention, and engagement metrics, enabling leadership to track performance and preserving \$50K+ in annual membership revenue.
- Built a standardized KPI reporting layer (SQL + Power BI) with documented definitions and refresh cadence, eliminating inconsistent metric calculations across stakeholders.

Data Scientist (Intern) Jun 2024 - Feb 2025

Abt Global, Inc. | *Rockville, MD*

- Built pay-equity risk flagging models to identify potential compensation outliers by gender and race; achieved 85% accuracy and reported precision/recall to account for class imbalance, enabling HR review by job family and level.
- Developed a self-service pay-equity analytics dashboard (Python + Power BI) enabling HR leaders to explore results by department, job level, and location.
- Automated model workflows using Python and Oracle FDI, reducing analysis turnaround time by 50%.
- Identified and resolved 50+ data quality issues affecting workforce analytics datasets, improving the reliability of compensation and HR reporting.

Data Reporting Assistant Dec 2018 - Jul 2021

SU Wellness Center | *Shepherdstown, WV*

- Developed 3+ interactive Power BI dashboards used by the campus recreation administrators to track student engagement KPIs, reducing monthly reporting effort by 30%.
- Automated recurring reports using SQL and Power BI, reducing reporting workload by 30% and improving accessibility of institutional data.

PROJECTS

Olympic Data Engineering Pipeline | PySpark, SQL, Power BI, Azure Databricks

- Built an end-to-end Azure data pipeline (Azure Data Factory → Databricks → Power BI), ingesting and transforming 11K+ Olympic athlete records across 40+ sports, delivering performance insights through an interactive dashboard.

Credit Risk Default Prediction Model | Python, Scikit-learn, Random Forest

- Developed a credit-risk classification model using Logistic Regression and Random Forest to predict loan default, achieving 0.90 ROC-AUC on a bank credit scoring dataset after feature engineering and model evaluation.

Fake News Detection Model | Python, NLP, TensorFlow, LSTM

- Built an LSTM-based deep learning model to classify fake vs. real news articles from a 44K+ article dataset, achieving 99.5% test accuracy with 0.99–1.00 precision after preprocessing, tokenization, and sequence padding.

EDUCATION

M.S. Data Analytics and Information Systems Dec 2024

Shepherd University, Shepherdstown, WV GPA: 3.83/4.0

B.S. Computer Engineering Dec 2021

Shepherd University, Shepherdstown, WV GPA: 3.45/4.0

Computer Science Bridge Coursework (CPT-eligible) May 2026 - Aug 2026

Hagerstown Community College, Hagerstown, MD
